SUMMARY

Mathematics student at Universitas Indonesia with experience developing full-stack applications, integrating AI APIs, and building data analysis pipelines. Work spans compliance and project management software, workflow automation, and statistical analysis of consumer lending data. Combines analytical problem-solving with practical development and clear communication.

TECHNICAL SKILLS

Software Development: TypeScript, React, Next.js, .NET Core, REST APIs, Tailwind CSS

Data & Databases: Python, pandas, PostgreSQL, Supabase, data cleaning, feature engineering, statistical analysis

AI & Automation: OpenAI API, Anthropic API, n8n, prompt engineering

Testing & Delivery: pytest, Playwright, GitHub Actions, Vercel

EXPERIENCE

TNEX | Malaysia

Full-Stack Developer | Part-time

Aug 2026 – Present

- Integrated OpenAI API capabilities into chatbot and content automation features; developed and maintained n8n workflows for AI-powered content generation.
- Improved chatbot context handling and response structure, refined content processing, and resolved duplicate-result issues in the Content Bot workflow.

Full-Stack Developer | Internship

Sep 2025 – Jul 2026

- Developed compliance and Project Portfolio Management applications using .NET Core, REST APIs, relational databases, Next.js, and Tailwind CSS.
- Built AI assistants with OpenAI and Claude APIs, including a Work Breakdown Structure feature generating project tasks, risks, and planning components.
- Built an asynchronous integration service for bidirectional data synchronization between Freshdesk and Goliath.
- Designed an audit dashboard and improved data loading, filtering, portfolio views, and conflict detection in collaboration with cross-functional teams.

SELECTED PROJECTS

Credit Risk & Lending Portfolio Analytics

Jul – Aug 2026

- Analyzed 307,511 consumer lending applications and 1.41 million linked prior decisions to examine segments associated with payment difficulty.
- Built a reproducible Python and pandas pipeline for cleaning, feature engineering, aggregation, statistical validation, and dashboard-ready exports to Next.js.
- Reported 95% Wilson confidence intervals and suppressed segments below 500 applications; identified an 8.07% portfolio payment-difficulty rate through descriptive analysis.

Sakuara – Personal Finance Workspace

Jul – Aug 2026

- Built a React and TypeScript application for accounts, transactions, transfers, budgets, savings goals, multiple currencies, and financial analytics.
- Independently handled product design, frontend development, Supabase/PostgreSQL database structure, authentication, Playwright testing, and Vercel deployment.

EDUCATION

Universitas Indonesia

Mathematics

Depok, Indonesia

Aug 2023 – Aug 2027 (Expected)
